

CROSSMULLER

THE HIVE

PANEL SORTING & STORAGE SYSTEM

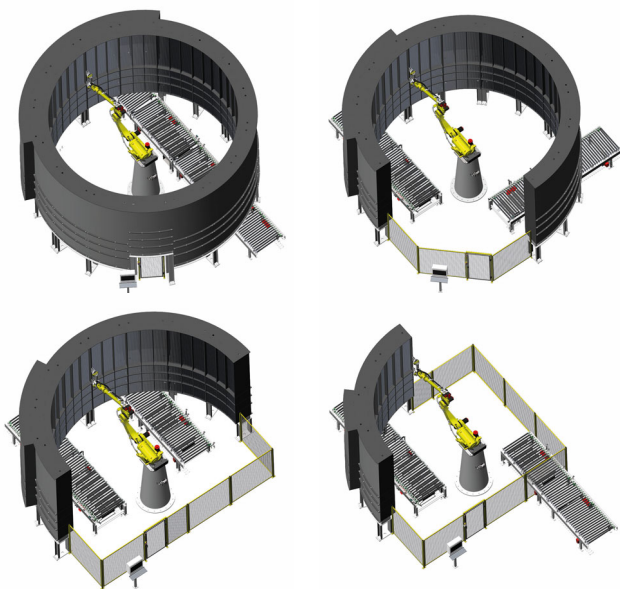

Eliminate clutter from your factory floor with The Hive panel sorting and storage system. The state-of-the-art robotic system not only reduces manual handling and possibility of damage but provides real-time visibility of any stored piece data allowing instant assessment of a job's readiness to start the next process.

The Hive is designed and manufactured in Australia by Crossmuller's multi-disciplinary engineering team, who specialise in automation and possess extensive experience in the panel industry.

The Hive utilises an optimised storage methodology which provides an unmatched storage density while maintaining direct access to approximately 2000 parts per complete cell at a nominal rate of 6 movements per minute.

The conveyor layout and racking system can be configured to suit your requirements, along with the outfeed sequence of parts optimised for downstream assembly, flat-packing or other processes.

Crossmuller can assist with your factory optimisation and layout to create a tailor made long-term plan that launches your business into the future. To explore how The Hive can provide efficiency and growth for you, get in touch with us today.
